

Tuneable Near-IR Picosecond Pulse Laser

DESCRIPTION

The Chromacity Auskerry is a near-IR continuously tuneable picosecond pulse laser. It consists of a fully integrated 1040nm pump source and optical parametric oscillator (OPO) delivering broad bandwidth coherent light across the 1.4 μm – 4.2 μm spectral region (7150 cm^{-1} – 2400 cm^{-1}).

The Chromacity Auskerry has two wavelength ranges (signal: 1.4 μm – 1.8 μm , and idler: 2.4 μm – 4.2 μm), delivered via separate free-space outputs. The 1040nm pump source is also available to the user from a third output. Optionally, the outputs can be externally fibre-coupled, simplifying system integration.

The output pulses are typically <3ps. The fully integrated pump, OPO and amplifier comes with an accompanying PSU, simplifying placement in a typical laboratory environment.
